

HOME AND BUSINESS WINDOW TINTING - NO LONGER JUST FOR PROTECTION AGAINST THE SUN

Window film (or tint) has often been described as “sunglasses for your windows.” However like many products, window film has evolved and can do so much more than just protect against UV rays.

There is a wide range of specialised window film solutions for homes and businesses these days, which can offer a huge number of benefits. Film and tinting can be used for a variety of uses including helping to reduce heat, glare and sun damage in a living area or bedroom, provide privacy and security, protect business premises, bus stops and train stations from damaging graffiti, or to simply add a decorative element to a shop front. And films, like modern electrical appliances now come with “energy-star” ratings which allow people to determine the right product for their specific circumstances.

Laminated glass has been around for some years now and is well known to be able to better absorb impacts and resist shattering. It is being increasingly used to replace older style shower screens, especially the type that used to be strengthened internally with wire. Not only do modern laminated glass shower screens increase safety but they provide a more modern and streamlined aesthetic to a bathroom. There are films available now which work in the same way as laminated glass. These films can be retro-fitted to existing or older glass which may not meet current safety standards. It can be a more inexpensive and simpler way to increase the safety and security of a home or business than undertaking a full reglaze.

O'Brien Glass is able to provide further information on any of the products mentioned above by visiting the website at <https://www.obrienglass.com.au/service/window-tinting/>
